

# REUSE. REDUCE. RESPECT.

In a determined drive to **reduce non-recyclable waste and promote more sustainable alternatives**, the sale of single use plastic drink bottles and disposable vapes are banned on-site; and all crisps are sold in compostable packaging.

All generators across the Festival site are run on sustainable, renewable palm oil-free HVO fuel – made from waste cooking oil – helping **reduce CO2e emissions**.

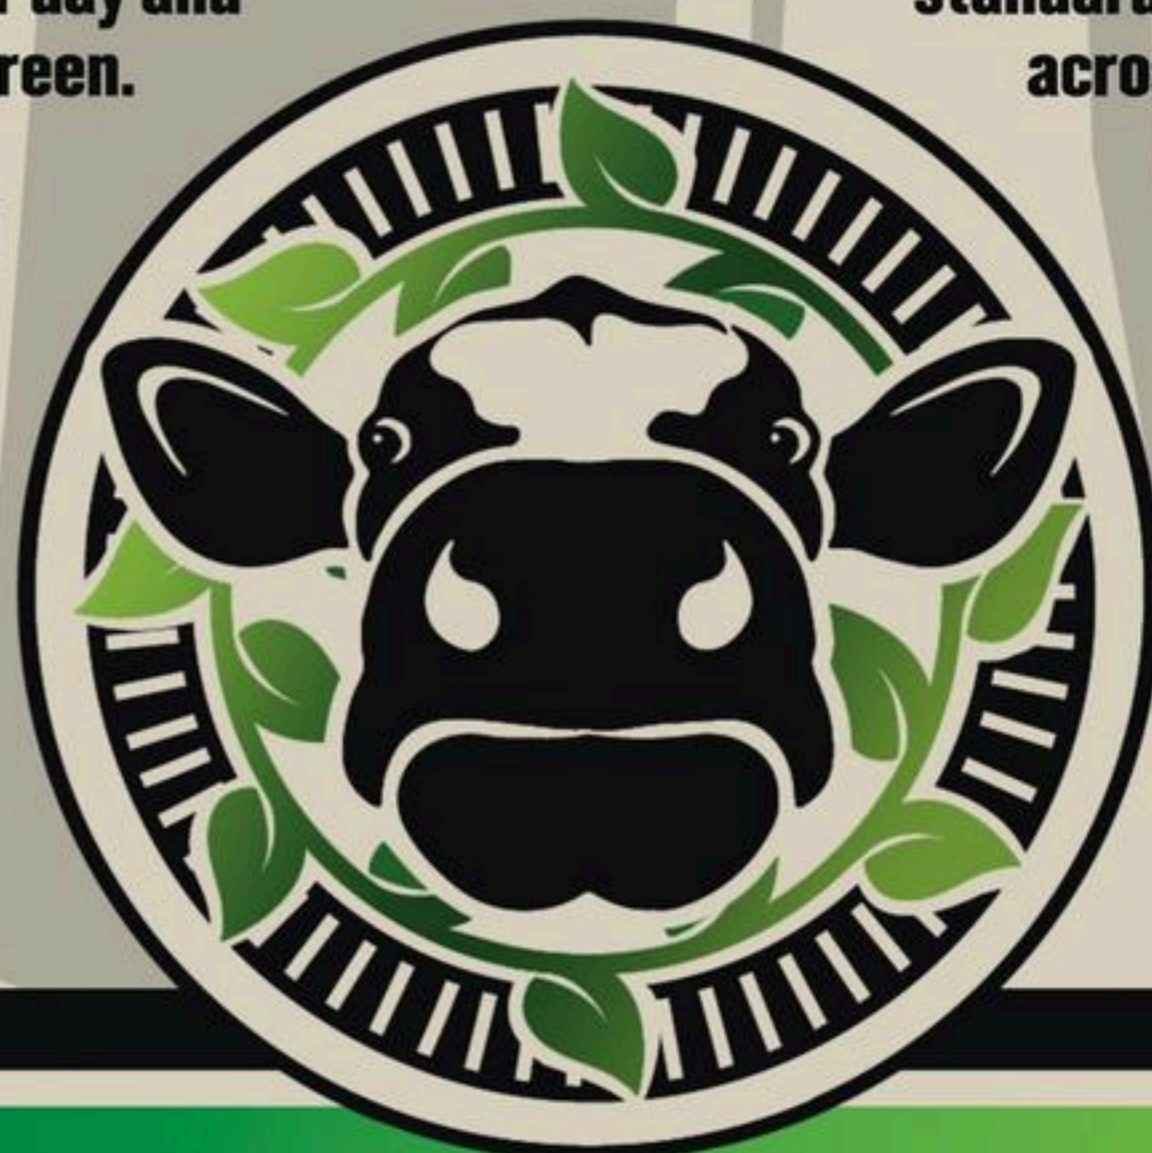

Our sustainable travel-initiatives have helped over **hundreds of thousands** of ticket-holders travel to the Festival by bike or public transport. Each year, more than 40,000 ticket-holders take advantage of these for their Festival travel.

Our own **on-site recycling plant** is the country's largest events-run facility and ensures we can hand-separate our own waste for single stream recycling, avoiding the need to send waste to landfill.

We have a fleet of **electric and hybrid vehicles** to transport our crew and artists

A temporary **wind turbine**, installed alongside a solar panel and battery system, will produce up to 300kWh of energy per day and power food stalls in Williams Green.

Worthy Farm and the Festival site is rich with biodiversity and we have many **nature reserves and protected areas** across the Festival to help ensure these habitats and its wildlife are looked after.

We passionately support our charity partners – Greenpeace, Oxfam and WaterAid – and their work raising awareness of **global and environmental issues** close to our heart.

All crockery and plates at the Festival are either **reusable or compostable** – and inedible food waste is turned into fertile compost or sent to anaerobic digestion.

All production areas will be either powered by lower impact, **fossil-fuel free** electricity or will run on solar PV and battery hybrid systems.

**Clean energy** from the Festival's own 250kWp solar PV array, as well as our anaerobic digester and 125kVA biogas plant power, provide energy for Festival offices and some production areas as well as helping to charge some battery systems.

Over **99%** of all tents have been taken home after each Festival since 2019.

We **engage** as many people as we can with issues that we feel passionately about such as climate change activism, sustainable entertainment and living, diversity and inclusivity.

Our Green Fields have run on solar, wind and pedal power since 1984, setting a **fossil-fuel free** standard we aspire towards implementing across the Festival.

Since the early 1980s, our Festival has aligned itself with **climate activism**. Across the site, we've created stages and areas to share ideas about sustainable living and environmental awareness.

# LOVE THE FARM. LEAVE NO TRACE.
